## Risk and Trend Mapping n°17 - 2016 Risk Outlook

The AMF has published the 2016 Risk Outlook, which examines the main risks affecting financial markets. The publication analyses the trends in markets and the financing of economic activity, and also looks at market organisation and intermediation, household savings and collective investment. Its release comes shortly after the June 23rd referendum deciding the UK's exit from the EU, which ushers in a period of profound uncertainty.
