Provision of non-financial data: mapping of stakeholders, products and services

Over the past decade, the development of sustainable finance, combined with the increase in regulatory texts on non-financial reporting and transparency, has contributed to a sharp increase in demand for non-financial data. This has led to significant changes to the provision of non-financial data and services.

This study reviews these changes and provides detailed mapping of the players in the sector and the services they offer. It is based on an analysis of a sample of 25 companies, considered as operating in Europe on the basis of their own registered address, that of their clients or of the entities concerned by their service offering.

It accompanies the joint position paper published by the AMF and the Dutch financial markets authority (Autoriteit Financiële Markten, AFM), calling for a European regulation for the provision of ESG data, ratings, and related services.
